Marketing & Outreach – Set Goals & Objectives

Description

Clearly defined goals and objectives will help direct marketing and outreach activities, communicate the value of your program services to target audiences, and guide decisions about the approaches you choose to implement.

Your program’s goals will serve as a starting point from which you will develop specific marketing and outreach objectives. Use the information collected during your market assessment and program design activities to align the objectives of your marketing and outreach with overarching program goals.

Objectives are specific and measurable, and should be realistic. They support goals and represent desired outcomes. Marketing and outreach objectives typically include:

- Raising consumer awareness (e.g., number or percentage of target audience members reached through websites, materials, or events)
- Behaviors that you want customers to undertake (e.g., number of customers scheduling an assessment or attending a home energy efficiency demonstration)
- Customers showing interest in the program (e.g., responses to a call for action or click-throughs on a website)
- A time-frame during which the objective should be met.

Programs should be flexible and realistic when setting marketing and outreach objectives. Make sure you have a way to measure each objective, and keep in mind that objectives may need to evolve as your program is implemented.

This handbook describes key steps to setting your marketing and outreach objectives:

- Review program goals
- Set marketing and outreach objectives that tie to your program goals
- Obtain management and stakeholder buy-in and approvals.
Step-by-Step

Goals and objectives will help direct marketing and outreach activities, communicate the value of your program services to stakeholders, and guide decisions about the approaches you choose to implement. By establishing marketing and outreach objectives, you can determine when or whether your marketing and outreach efforts have been successful.

These steps will help you establish marketing and outreach objectives:

Review program goals

Program goals identify what your program aspires to accomplish over the long term. Program goals should be set as part of your Program Design.

Your marketing and outreach efforts should not need separate goals, but should be designed to support overarching program goals. You will want to review these program goals to determine a vision for how marketing and outreach can help meet them. Using that vision, you will be ready to develop specific marketing and outreach objectives.

Set marketing and outreach objectives that tie to your program goals

After reviewing your overall program goals, develop marketing and outreach objectives that tie into them. Objectives are specific, measureable, achievable, relevant, and include a timeframe. They specify targets for how you will achieve your goals.

Goals vs. Objectives vs. Tactics
Example marketing and outreach objectives that tie into program goals are displayed in the table below.

### Examples of Marketing & Outreach Objectives

<table>
<thead>
<tr>
<th>PROGRAM GOAL</th>
<th>MARKETING AND OUTREACH OBJECTIVES</th>
</tr>
</thead>
</table>
| Educate and motivate homeowners in a particular neighborhood/demographic on program offerings. | • Reach 20,000 homeowners with information about rebates and financial incentives, get 20% of them to follow up within 2 weeks of outreach.  
• During the program’s first six months, identify and hold outreach events in 20 targeted neighborhoods. |
| Build credibility for the program and its offerings through partners and community trusts. | • Form partnerships with 10 organizations or individuals the community trusts.  
• Recruit five partners to actively promote program offerings (or support specific campaigns or outreach events) with their constituents in the program’s first year, and live in |
| Demonstrate the benefits of home energy improvements to create demand for home energy assessments and upgrades. | • Hold 30 events in upgraded homes with friends and neighbors invited in the program’s first year, with a call to action to sign up for a home energy assessment.  
• Identify 15 satisfied homeowners and share their story in marketing material and on the Web within one month of their home energy upgrade. |

As your marketing and outreach objectives are decided, make sure you have a way to [measure progress](#) toward each. You may need to revise or change your objectives over time. Programs often have to make adjustments based on valuable customer and community feedback.
Also make sure your marketing and outreach objectives align with program capacity. For example, if your marketing and outreach objective is to reach 20,000 homeowners with information about rebates and to get 20% of them to follow up within 2 weeks of outreach, make sure your program is ready to handle this spike by having enough staff on hand to respond to inquiries and enough contractors ready to perform home energy assessments and upgrades. Learn more about preparing for a spike in upgrades in the U.S. Department of Energy’s case study, Spotlight on Austin, Texas: Best Offer Ever Produces Upgrades in Record Time.

### Energy Upgrade California’s Goal and Related Marketing Objective

**Program Goal:**
- Promote job creation and reduce aggregate greenhouse gas emissions through energy and resource-saving upgrades of existing building stock through three funding sources.

**Marketing and Outreach Objective:**
- Make marketing kits available for all program partners (i.e., contractors, realtors).

*Source: Energy Upgrade California in Los Angeles County Marketing and Communications Plan, Energy Upgrade California, 2010.*

---

**Obtain management and stakeholder buy-in and approvals**

Engage both your program’s leadership and stakeholders early in the planning process to determine when you will need or want their input and approval moving ahead. You would not want to develop and start working toward a set of objectives only to find out later that your program manager has different ideas.

Marketing and outreach stakeholders can include contractors, community leaders, utilities, nonprofit organizations, and other groups with which your program might form partnerships. Stakeholder input into your planned marketing and outreach objectives will help inform your analysis of what is possible and can also be a valuable first step for tapping into their support later. When asking for stakeholder input, be sure to mention that input will be critical to helping your program meet its marketing and outreach objectives, and any support provided could also benefit their efforts as well.
Tips for Success

In recent years, hundreds of communities have been working to promote home energy upgrades through programs such as the Better Buildings Neighborhood Program, Home Performance with ENERGY STAR, utility-sponsored programs, and others. The following tips present the top lessons these programs want to share related to this handbook. This list is not exhaustive.

Set realistic expectations for launching and scaling up your program

Many program administrators have found that launching and scaling up a program often takes longer than planned for, especially when forming partnerships with contractors and lenders. New energy efficiency programs often need at least 2-3 years to launch and become fully operational. Across programs, the amount of time it takes to get to full operations depends on many factors, including the number of qualified contractors working in the area, the availability of funding, the level of stakeholder and partner support that is available, the program’s goals and strategies, and the presence of unique program features that may take time to develop, such as community workforce agreements or loan products. Many program administrators found it helpful to set realistic expectations internally—and with key partners and stakeholders—about how long it takes to get programs fully up and running. And, they suggest celebrating and communicating achievements along the way.

- **emPowerSBC** in Santa Barbara, California, found that launching its program and scaling up took more time than expected. The launch of the program was delayed more than a year as the program modified its financing strategy from one that relied on residential PACE to one focused on a loan-loss reserve. Following the launch, hiring delays kept the program from being fully staffed for around six months. Contractors working with the program reported that it took three to twelve months for a lead to turn into a signed contract for upgrade services because homeowners took their time deciding whether to invest in energy efficiency.

- The **Virginia State Energy Program** (SEP) found that it was difficult for its three programs around the state—the **Local Energy Alliance Program** (LEAP), the **Richmond Region Energy Alliance**, and Community Alliance for Energy Efficiency (Cafe2)—to meet their upgrade targets in three years because the home performance industry in the state was still developing when the programs were initiated. These in-state programs started with little to no infrastructure in place and had to address barriers such as lack of qualified contractors before they could even begin offering home energy upgrades. For example, the programs found that contractors were reluctant to modify their business models and agree to undertake the paperwork and data collection the programs required. Over time, the programs developed strategies to work more effectively with contractors, such as holding monthly contractor meetings (in the case of LEAP) and establishing written Memoranda of Understanding with contractors to clarify mutual expectations (in the case of Cafe2). Virginia SEP advised that programs’ goals and timelines should reflect the starting conditions and the work that needs to be accomplished in order to achieve program goals.

- **Enhabit**, formerly Clean Energy Works Oregon, began with modest goals for a pilot project in Portland and then ramped up its ambitions as it expanded statewide. The goals for the program’s pilot project were to upgrade 500 homes in Portland, build a qualified workforce, and test its approach to service delivery. After the pilot, the program expanded to all of Oregon and upgraded over 3,000 homes around the state in three years.
Examples

The following resources are examples from individual residential energy efficiency programs, which include case studies, program presentations and reports, and program materials. The U.S. Department of Energy does not endorse these materials.

Case Studies

**Spotlight on Austin, Texas: Best Offer Ever Produces Upgrades in Record Time**
Author: U.S. Department of Energy  
Publication Date: 2011  
This case study describes Austin Energy's short-term, comprehensive rebate/financing offer to jump-start participation and valuable lessons learned along the way.

**Creating a Program that Supports Community Goals**
Author: U.S. Department of Energy  
Publication Date: 2014  
In this video interview segment, Yvonne Kraus of Conservation Services Group describes how the program aligned its goal of increasing energy efficiency with the community's goal to avoid building a new electrical substation.

Program Presentations & Reports

**California Public Utilities Commission Five-Year Marketing, Education and Outreach (ME&O) Strategic Roadmap**
Author: California Public Utilities Commission  
Publication Date: 2017  
The goal of the Marketing Education & Outreach (ME&O) Program is to motivate consumers to take action on energy efficiency/conservation measures and change their behavior. The program strives to both increase consumer awareness and facilitate the ability to act and incorporate technological advances or behavior change using all available resources to reduce energy and choose clean energy options. This Five-Year ME&O Strategic Roadmap includes two main sections: (1) the objectives, strategies, and metrics for customer engagement and how these strategies will lead greenhouse gas reduction and energy efficiency goals of the California Public Utilities Commission.

**California Public Utilities Commission Joint Consumer Action Plan**
Author: California Public Utilities Commission  
Publication Date: 2017  
This document reflects what the California Public Utilities Commission's customer engagement campaign will accomplish from April 1, 2017 through March 31, 2018. It also includes goals and objectives, target audiences, high-level approaches and strategies, metrics, and implementation roles and responsibilities for each strategy.

**Marketing, Education, and Outreach Planning for Energy Upgrade California**
Author: Rory Cox, California Public Utilities Commission  
Publication Date: 2016  
This presentation covers the strategies, objectives and metrics for Energy Upgrade California.

**Community Power Works of Seattle Planning Presentation**
Author: Community Power Works  
Publication Date: 2010  
This planning document from Community Power Works of Seattle, Washington, includes flow charts and tables designed to help guide both the initial launch of the program, which includes setting goals, and its ongoing development.

Program Materials
A marketing and communications plan from Clean Energy Works Oregon (now Enhabit) outlines the program's marketing vision and objectives, as well as the strategies the program planned to undertake to meet these goals.

This marketing plan from EnergyWorks Kansas City includes a strategic focus for the program's outreach activities, as well as three core marketing objectives Kansas City set out to meet.

This strategic plan describes the goals, objectives, market, and business model for the Greater Cincinnati Energy Alliance's energy efficiency program and service offerings.
Toolbox

The following resources are available to help design, implement, and evaluate possible activities related to this handbook. These resources include templates and forms, as well as tools and calculators. The U.S. Department of Energy does not endorse these materials.

Templates & Forms

None available at this time.

Tools & Calculators

Community-Based Social Marketing Toolkit
Author: U.S. Department of Energy
Publication Date: 2017

This toolkit describes how to strengthen residential energy efficiency program outreach and marketing efforts through data-driven, tailored efforts to change behaviors. One of the greatest challenges facing the residential energy efficiency market is motivating people to take steps to save energy. This toolkit provides guidance, resources, and examples for applying community-based social marketing (CBSM) to increase the number of homes that are energy efficient.
**Topical Resources**

The following resources provide additional topical information related to this handbook, which include presentations, publications, and webcasts. Visit [Examples](#) for materials from and about individual programs.

### Topical Presentations

**Connect 4: Energy Efficiency in Relation to Other Program and City Goals (101)**
*Author: U.S. Department of Energy*
*Publication Date: 2016*

This summary from a Better Buildings Residential Network peer exchange call focused on how energy efficiency could be used to achieve other goals. It features speakers from the City of Orlando and Seattle City Light.

**Just What the Doctor Ordered: Integrating Health Benefits Into Energy Efficiency Programs**
*Author: U.S. Department of Energy*
*Publication Date: 2017*

This summary from a Better Buildings Residential Network peer exchange call emphasizes the health benefits of upgrades to make your program relevant to potential partners and audiences. Speakers include the City of Fort Collins, Colorado and Green & Healthy Homes Initiative Greater Syracuse, Home Headquarters.

**Overview of Business Planning and Business Models**
*Author: U.S. Department of Energy*
*Publication Date: 2011*

This presentation is aimed at program administrators and describes business planning concepts such as program mission, vision, and goals.

### Publications

**Powering the New Energy Future From the Ground Up**
*Author: Climate Solutions*
*Publication Date: 2012*

This report from Climate Solutions analyzes small- to medium-sized American cities that are using successful methods to further clean energy economic development. Better Buildings Neighborhood Program partners that are featured in the report include Bainbridge Island and Bremerton, Washington; Boulder, Colorado; Bedford, New York; Madison, Wisconsin; and Grand Rapids, Michigan. The report includes details on the how the featured cities funded their projects, found successful models to reach their goals, and to see which new projects are off to a promising start.

**Massachusetts Joint Statewide Three-Year Electric and Gas Energy Efficiency Plan**
*Author: Mass Save*
*Publication Date: 2012*

This plan was jointly developed by gas and electric companies in the state of Massachusetts to set aggressive goals for 2013-2015 through a sustained and integrated statewide energy efficiency effort in accordance with Green Communities Act.

### Webcasts
